## AIR COOLED CHILLERS WITH SCROLL COMPRESSOR AND AXIAL FANS

COOLING CAPACITY FROM 150 to 771 kW

The images shown above are indicative and not binding.

AIR COOLED CHILLERS FOR OUTDOOR INSTALLATION WITH SCROLL COMPRESSOR, AXIAL FANS AND HEAT-EXCHANGE EXTERNAL COILS WITH MICRO-FINNED COPPER TUBES

Packaged air cooled chillers of ERAE...Kc series are suitable for outdoor installation and can be used to cool pure fluid solutions for air conditioning or in industrial applications.

Multiscroll technology allows to reach great efficiency improvements at part load, if compared to the other traditional systems for cooling capacity control.

The coupling of high-efficiency finned exchangers and the thermo physical purity of R410A refrigerant, particularly glide-free at state exchanges, allows this range to attain good nominal performances and to meet the requirements for seasonal efficiency foreseen by the (EU) Regulation 2016/2281.

These units have been designed considering limited space requirements and keeping, at the same time, high cooling performances. Such result has been attained with high-quality and up-to-date components.

All units are completely assembled and tested in the factory with specific quality procedures and are already equipped with all necessary

hydraulic, refrigerant and electrical connections for a quick installation on site.

Before factory testing, cooling circuits are tested under pressure and then supplied with R410a refrigerant and a non-freezing oil charge.

### Operation limits:

#### Standard units

**Air:** from -20 to 42°C; **Water** (outlet from the evaporator): from 5 to 15°C.

#### WA application units

**Air:** from +10 to 38°C; **Water** (outlet from the evaporator): from 7,1 to 18°C.

### Structure

Structure made of a base and a chassis manufactured in high-thickness galvanised steel, assembled with stainless steel rivets. All galvanised steel surfaces are powder-coated with colour RAL 7035.

### Compressors

Scroll compressors with R410a refrigerant, operating on two independent circuits in tandem or trio version. The compressors are installed on rubber isolation dampers, provided with direct-start motors cooled by suction gas and fitted with both overload protection and crankcase heaters. They are charged with polyester oil and the terminal board is IP54. The on-board microprocessor automatically controls the individual compressors to regulate the cooling capacity.

### Evaporator

Stainless steel plate evaporator of dual circuit type, with high thickness close cell insulation and UV ray-proof. The max operating pressure limits are 6 bar for water side and 45 bar for refrigerant side. The evaporator is also equipped with safety water flow switch switching off the unit in case of low water flow through the evaporator.

### Heat-exchange coils

Heat-exchange external coils with micro-finned copper tubes, positioned in staggered rows and mechanically expanded into an aluminum finned pack. Fins are designed with such a shape providing the highest heat exchange efficiency. The max operating pressure refrigerant side is 45 relative bar.

### Fans

6-poles Axial Fans with electrical motor with external rotor directly coupled to the impeller and driven by a V/F inverter system which controls the condensation temperature. Aluminum blades with wings profile are suitably designed to avoid any turbulence in the air detachment zone, granting in this way the max efficiency with the minimum noise level. The fan is equipped with galvanized steel protection grid painted after the construction. The fan motors are of totally closed type and have got a protection factor IP54 and protection winding-flooded thermostat.

### Refrigerant circuit

Independent cooling circuits, each provided with a shut-off valve for refrigerant charge, antifreeze sensor, shut-off valves on liquid lines, sight glass, dehydrating filter, high-pressure safety device on high pressure refrigerant side and mechanical thermostatic expansion valve (electronic type from 40020 model to 59020) as well as high and low pressure switches and gauges.

### Electric board

Electric board built in compliance with CE Norms, inside of which are placed the control system and the components for motors starting, wired and tested in the factory. It is made by a cabinet suitable for outdoor installation, containing power and control devices, microprocessor electronic board complete with keypad and display, for visualizing the several functions available, main switch of lock-door type, isolation transformer for auxiliary circuits, automatic switches,

fuses and protection switches for compressors and fans, terminals for general alarm and remote ON/OFF, terminal board, relays for phase sequencing and possibility to interface to BMS systems.

### Versions

**ERAE...Kc** – standard version

#### **ERAE...U Kc – Ultra silenced version (U)**

Reduced sound level in version U is realised by using condensers with larger surface areas as well as soundproofed compressor cabinets.

### Applications

#### **Warm applications version (WA)**

Units CE certified in compliance with the European regulation 2016/2281 at working conditions, on the use side 23°C / 18°C.

#### **Abroad market version (AM)**

Units in compliance with the European regulation whose sales is reserved to countries out of the European Union.
